- NOTE:
- The above data were measures under standard conditions and actual data may be different. We would update data without further notice.
 - The luminous flux is tested while the corresponding-color products were lightened.
 - UL max run refers to operating length at UL class II @100W.48V.
 - Luminous flux values were measured accordance to IES LM-80-08. LED chips with range tolerance of +/- 10%.
 - Each maximum-run requires a dedicated power feed from the driver. Do not extend exceed the recommended maximum run length. Max run may exceed Class 2 limits.
 - Actual wattage may be different from the calculated wattage due to voltage drop while using.
 - Actual efficacy value is determined by the specific LED driver (power supply). An estimated efficacy value can be calculated as follows: Luminous intensity divided by average power consumption.
 - Do not install products in the conditions that exceed the listed ambient temperature. Exceeding the maximum ambient temperature may damage LED chips, reduce the total lamp life, luminous intensity output, and/or adversely impact color consistency.
 - Operating temperature was measured under the minimum and maximum ambient temperature environment.
 - Cutting segment are marked on the profile below.

Performance

- LED chip data measured in accordance to IES LM-80-08.
- Photometric & Colorimetry data measured in accordance to IES LM-79-08, in Blueview 's TUV Innovation Lab.

- Note:
- For LED quantity less than 160leds/m with standard power, we recommend to use 20AWG parallel wire/sheathed cable with wire length less than 20cm, user need to reduce the max run when the wire length more than 20cm.
 - For LED quantity more than 160leds/m with standard power, we recommend to use 18AWG parallel wire/sheathed cable in single feed, or 20AWG parallel wire or sheathed cable in both ends with wire length less than 20cm. Users need to reduce the max run properly when the wire length more than 20cm.
 - Above conditions are only applicable to products with the PCB width of 10mm or more, for other width needs to be evaluated separately.
 - Dimension tolerance: length $\pm 6\text{mm}$ [0.24inch]; width $\pm 0.2\text{mm}$ [0.008inch]; thickness $\pm 0.2\text{mm}$ [0.008inch]
